

**Cable-SHiFT**  
**Cable Length Measurement**  
**Type II/Rear Engine**

Location of the Cable-SHiFT shifter box and handle is virtually unlimited. For purposes of this diagram the layout for a single seat vehicle will be used.

Two measurements are required as shown below:

1. Measurement 'A' is taken parallel to the centerline of the vehicle.
2. Measurement 'B' is taken perpendicular to the centerline of the vehicle.  
Note: In a two seat (or 4 seat) left hand drive vehicle, measurement 'B' = 0.0
3. Proceed with the end of the tape (over or under the fuel tank if necessary) to a point between and ahead of the seats where the centerline of the shift handle will be.
4. Read the tape measure in whole inches.

Note: Measurement 'A' & 'B' will determine both cable lengths.
